

Engineering Change Control Process

INTRODUCTION. This paper will provide practical approaches to implementing and managing engineering changes and explore Product Data Management (PDM) or Product Lifecycle Management (PLM) and Enterprise Resource Planning (ERP) can be used as a tool to support configuration management and engineering change control.

Configuration Management and Engineering Change Control

Process engineering is the understanding and application of the fundamental principles and laws of nature that allow us to transform raw material and energy into products that are useful to society, at an industrial level. By taking advantage of the driving forces of nature such as pressure, temperature and concentration gradients, as well as ...

Often small to medium-sized businesses make do with the tools they have to manage their product data. Paper, spreadsheets and email are often used throughout the product development and engineering change management processes.

Engineering Change Order (ECO) - Definition & Template ...

The engineering design process is a methodical series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary.
